

From Simulation to Reality: Real-Time AI-Powered Quality Inspection

Images from 3D models

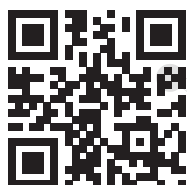

Train neural network

Real-time testing on embedded device

- Real-time AI for automated quality control
- Customizable system for different machines
- Combination of multiple inspection methods: from image processing to deep learning
- Edge-optimized, modular software on Nvidia Jetson Orin NX
- Robust pipeline: from data acquisition through preprocessing to evaluation

Master Thesis
Author: [Damian Wildmann](#)
Supervisor: Prof. Dr. Matthias Rosenthal
