Dr. Markus Rimann, Head Competence Center TEDD,
Fani Kalaitidis, EMBA HSG, CEO
- 13:10 – 14:00 Network-lunch

About

[Event Website](#)

Founded in 1949, the Blood Transfusion Service, Swiss Red Cross, Zurich began supplying blood to Zurich hospitals from a small facility on Gassnerallee. In the early 1950s the Federal Council charged the Swiss Red Cross with organizing a cost-covering national blood donation service based on voluntary, unpaid donations, a mandate the Foundation has upheld ever since and continuously developed.

Today the Blood Transfusion Service, Swiss Red Cross, Zurich employs about 220 people at sites in Zurich, Schlieren, Winterthur, Lachen and Uster and processes around 50,000 donations annually, with strong focus on donor health and patient safety. The organisation is now a high-tech transfusion-medicine provider, research leader and specialist in rare blood types, and — together with partners in Graubünden, Eastern and Central Switzerland — supplies roughly 40% of the Swiss population.

About TEDD Competence Centre

TEDD (Tissue Engineering for Drug Development and Substance Testing) is an education, R&D and networking platform promoting the application of 3D organotypic technologies, with the core goal of replacing animal experimentation for therapies development.

Based in Switzerland, TEDD is focused on 3D for 3Rs. The community is composed of international members from academia, clinics, industry and non-profits.

Training of members is achieved through regular events at the national and international level, including workshops, symposia, company visits, scientific reviews and we provide a platform to generate research consortia, projects and grant applications.
