

Master in Life Sciences

A cooperation between
BFH, FHNW, HES-SO, ZHAW

Module title	Ecological Infrastructure in Landscapes
Code	E4
Degree Programme	Master of Science in Life Sciences
Group	Environment
Workload	3 ECTS (90 student working hours: 42 lessons contact = 32 h; 58 h self-study)
Module Coordinator	<p>Name: Dr. Claude Fischer Phone: +41 (0)22 546 68 75 Email: claude.fischer@hesge.ch Address: hepia, filière Gestion de la Nature, 150 route de Presinge, 1254 Jussy</p>
Lecturers	<ul style="list-style-type: none"> • Dr. Claude Fischer, hepia, HES-SO • Dr. Beat Oertli, hepia, HES-SO • Dr. Jeremy Gauthier, Muséum Cantonal des Sciences Naturelles de Lausanne • Member of the cantonal administration and local experts
Entry requirements	<p>Knowledge of following concepts: Biodiversity, Ecosystem, Populations and Communities, Spatial behavior (home range, dispersion, migration), Spatio-temporal space use of populations (seasonality, activity), Theory of island biogeography, Basics in population genetics, Basic GIS</p> <p>Recommended documents (to acquire the entry requirement): Campbell Biology (11th edition), chapters: 23, 53, 55.</p> <p>See also information under “comments”</p>
Learning outcomes and competences	<p>After completing the module, students will be able to:</p> <ul style="list-style-type: none"> • Assess the ecological infrastructure in a landscape • Identify corridors and gaps in ecological networks (with GIS tools) • Plan and model land-use trends (e.g. development in urban, rural or mountain areas) • Make propositions for the restoration of the landscape (functional infrastructure)
Module contents	<ul style="list-style-type: none"> • Landscape and Movement Ecology • The national ecological network (from national to local implementation) • GIS tools for assessing and representing the ecological infrastructure and the dynamics of land-use • Genetic tools for measuring ecological connectivity (spatial genetic structure of populations) • Decision-making support for spatial land-use planning and interconnecting areas of importance
Teaching / learning methods	The module is organized in three complementary parts: 1. Theoretical introduction, 2. A real case-study (in interaction with professionals), 3. An introduction to landscape genetics. These different aspects will be integrated in a practical project.
Assessment of learning outcome	1. An individual written report (with a joined GIS project) to be handed in 2 weeks after the end of the module (100%)
Format	Winter School
Timing of the module	Autumn semester, CW 6

Links to other modules	<p>There will be close coordination with the CS-module E5 “Biodiversity”. Both modules are designed to be complementary.</p> <p>Links with E3 “Sustainable Natural Resource Management”, GIS modules at HES-SO and BFH.</p>																								
Comments	<p>There is a participant limit in this module. Registrations will be considered as follows:</p> <ol style="list-style-type: none"> 1. Students for whom E4 is a compulsory module 2. Students from the Environment-Cluster 3. Students who need the ECTS for the graduation in the semester concerned 4. The remaining places will be drawn by lot <p>Whether participation is possible will be communicated by the end of week 37.</p>																								
Last Update	10.04.2024
