|--|--|
| Module title | Materials Science |
| Code | C1 |
| Degree Programme | Master of Science in Life Sciences |
| Group | Chemistry |
| Workload | 3 ECTS (90 student working hours: 42 contact lessons = 32 h; 58 h self-study) |
| Module Coordinator | <p>Name: Dr. Michael de Wild Phone: +41 (0)61 228 56 49 Email: michael.dewild@fhnw.ch Address: FHNW, Hochschule für Life Sciences, Hofackerstrasse 30, 4132 Muttenz</p> |
| Lecturers | <ul style="list-style-type: none"> • Dr. Michael de Wild, FHNW • Dr. Patrick Shahgaldian, FHNW |
| Entry requirements | <p>Scientific background in chemistry, physics and analytical chemistry. The students need a Bachelor in Materials Sciences, Chemistry, Physics, Engineering, Biomedical Engineering or equivalent. Basic lectures on materials sciences, chemistry, physics and biomaterials are a prerequisite to follow this course.</p> |
| Learning outcomes and competences | <p>After completing the module, students will be able to:</p> <ul style="list-style-type: none"> • give an overview of the broad spectra of metallic and ceramic materials from the perspective of materials science from the macroscopic to the nanoscopic scale; • explain different state-of-the-art technologies and methodologies for the analysis of materials; • illustrate the important approaches involved in designing and creating materials and nanostructures; • express the central concepts in the field of nanosciences. |
| Module contents | <ul style="list-style-type: none"> • The solid state is discussed based on material scientific theories. • The crystallographic and electronic structure of solid materials, as well as optical, mechanical and magnetic properties are examined. • The influence of sterilization and irradiation on material properties is reviewed. • Shape Memory Alloys are discussed. • Metallographic preparation techniques, Fractography. • High-end oxide ceramics and their ability for phase-transformation toughening are discussed. • The macroscopic and microscopic structure and properties of metallic and ceramic materials are compared and state-of-the-art characterization methods are introduced. • Nanocrystalline materials are discussed. • Imperfections and their effects on material properties are highlighted. • Key physical characteristics of nanoscale materials (vs. bulk) are studied. • Fabrication, functions and properties of nanomaterials of different types are discussed. • Top-down as well as bottom-up approaches are emphasized; selected applications of nanomaterials in the field of life sciences are treated. |

| | |
|---------------------------------------|---|
| Teaching / learning methods | <p>Lecture and blended learning: <u>Contact lessons</u></p> <ul style="list-style-type: none"> • Lectures • Group Exercises • Simulations • Demonstrations <p><u>Self-study</u></p> <ul style="list-style-type: none"> • interactive simulations (https://phet.colorado.edu/en/simulations/category/new) • Individual Project Studies |
| Assessment of learning outcome | 1. Final written exam, closed book, (100%). |
| Format | 7-weeks |
| Timing of the module | Autumn semester, CW 38-44 |
| Venue | Olten |
| Bibliography | <p><u>Pre-reading</u> The scripts for this module will be available on moodle timely before the module starts. Likewise, selected scientific articles and instructions for pre-work are announced on the moodle platform.</p> <p><u>Course material</u> G. Carter, D. Paul, Materials Science and Engineering, ASM International, Materials Park, OH, 2010. ISBN 978-0-87170-399-6. E. Hornbogen, G. Eggeler, E. Werner, Werkstoffe, Aufbau und Eigenschaften von Keramik-, Metall-, Polymer- und Verbundwerkstoffen, Springer Verlag Berlin Heidelberg, 2008., ISBN 978-3-540-71857-4. W.D. Callister, D.G. Rethwisch, Materials Science and Engineering: SI Version (English), Wiley-VCH Verlag GmbH & Co KgaA, 2016. M. Köhler, W. Fritsche: Nanotechnology, 2. ed, Wiley-VCH Verlag GmbH & Co KgaA, Weinheim, 2007. ISBN 978-3-527-31871-1. J. N. Israelachvili, Intermolecular and surface forces, 3rd ed., Academic Press, San Diego, 2011.
